Document version 1.0

Date: June 20, 2026

US-01

As a business user, I want my Sales Invoice saved with all required details, so that it is ready for submission to the Tax Authority.

Acceptance criteria

1. Given a completely filled-out Sales Invoice, when the user saves the transaction, then the system saves it and marks it ready for submission.
2. Given missing mandatory fields in the Sales Invoice, when the user tries to save the transaction, then the system blocks the save and shows a message listing the missing fields.

US-02

As a business user, I want my invoice submitted to the Tax Authority for validation before it is issued to the buyer, so that I know it is compliant when the buyer receives it.

Acceptance criteria

1. Given a saved Sales Invoice, when the user submits it for validation, then the system sends the information to the Tax Authority and shows a Pending status.
2. Given the Tax Authority accepts the Sales Invoice, when the response returns, then the status changes to Validated and a validation reference is provided.
3. Given a Validated Sales Invoice, when a copy is produced, then the validation reference appears on it.

US-03

As a business user, I want to see each Sales Invoice's validation status, so that I know which invoices are done and which need my attention.

Acceptance criteria

1. Given submitted Sales Invoices, when the user opens the Sales Invoice list, then each Sales Invoice shows a status of Pending, Validated, or Rejected.
2. Given a status change, when it happens, then the displayed status updates without the user manually refreshing.

US-04

As a business user, I want a rejected Sales Invoice explained in plain language, so that I can fix and resubmit it without contacting support.

Acceptance criteria

1. Given the Tax Authority rejects a Sales Invoice, when the response returns, then the system shows the reason in plain language.
2. Given a rejected Sales Invoice, when the user corrects the flagged fields, then the user can resubmit it from the same Sales Invoice screen.
3. Given a resubmitted Sales Invoice, when it is accepted, then the status changes to Validated.

US-05

As a business user, I want my Sales Invoices kept safe when the Tax Authority service is unavailable, so that I never lose a Sales Invoice during an outage.

Acceptance criteria

1. Given the Tax Authority service is unavailable, when the user submits a Sales Invoice, then the system queues it and informs the user it will be submitted automatically.
2. Given the Tax Authority service is restored, when the queue is processed, then all queued Sales Invoices are submitted with no data loss.

US-06

As a system administrator, I want to set up the Tax Authority connection once, so that business users do not have to configure anything.

Acceptance criteria

1. Given a business account, when the system administrator enters the required configuration details, then the system saves and validates them.
2. Given saved configuration details, when a user submits a Sales Invoice, then the submission uses the configuration details automatically.

US-07

As a business user, I want to find past Sales Invoices and their history, so that I can respond quickly if the Tax Authority inspects our records.

Acceptance criteria

1. Given stored Sales Invoices, when the user searches by date or customer, then the matching Sales Invoices and their status history are displayed.
2. Given a Sales Invoice, when the user opens it, then the full status history is visible.
